

Sentry Doorsets

Simplifying your building programme

sentrydoors

About Sentry Doors

Our emphasis on quality is evident throughout our business from our premises, to the manufacturing area, to the doors we supply. From our origins in 1989 we have progressed to our current 6 acre purpose built site. With the ability to manufacture a wide range of internal and external doors to our customers requirements.

Our most recent development is our doorset division. To facilitate the further expansion of this key area we are currently commissioning a new purpose built 10,000sqft unit on our expansion site.

This brochure will hopefully provide a feel of not only the products and services we offer, but also the commitment and desire which has made Sentry Doors what we are today!

Why Doorsets?

Doorsets simplify the procurement process as one contract covers doors, frames, architrave and optionally hardware. Fitting times on site are dramatically reduced as the complex operation of getting the door to swing has already been performed. In addition doorsets tend to be fitted by builders, removing the need for expensive joiners on site. Administration cost are reduced as only one order and invoice need to be raised.

All our doorsets are manufactured under procedures which form part of our ISO9001:2000 accreditation ensuring quality.

Sentry doors have the skills and experience to exceed all your doorset requirements. Our state of the art manufacturing facilities ensure consistency and accuracy, producing doors & doorsets that give years of trouble free operation.

Doorsets are fitted at second fix when the wet trades have been completed, reducing the risk of moisture ingress and warping.

Doorsets can be certifiere accredited as a complete set where required, removing concerns over mix and match frames and doors.

sentry doors have the **skills** and **experience** to **exceed** all your doorset requirements

Security Doorsets

Sentry Doors can supply doorsets to PAS23/24 standards and also have experience of supplying to exacting Secure By Design standards. Our 200 man years of experience enable us to advise and guide our customers to ensure that the products we supply are cost effective and fit for purpose every time.

Acoustic Doorsets

Acoustic considerations are becoming increasingly important when supplying doorsets for apartments and communal housing. Sentry Doors have long term relationships with all the main suppliers and can work with you to ensure doorsets supplied meet your needs. Off site construction means the accuracy of seal placement is addressed on each and every doorset.

Fire Doorsets

Being one of the founder members of the BWF Certifire Scheme Sentry Doors are fully authorised to work on a variety of fire doors and frames thus ensuring that all doorsets supplied meet or exceed current legislative requirements.

Vision Panels

We have created vision panels in doors for many years and can offer a range of beading and glazing options. Our close working relationship with key suppliers also allows us to produce bespoke and innovative designs where required.

Environmental Policy

It is the policy of **Sentry Doors Ltd** to develop, improve and maintain high environmental standards in all our operations.

In support of this policy we aim:

1. To consider environmental aspects in our decision making.
2. To exceed minimum legal standards.
3. To promote environmental awareness among our employees.
4. To endeavour to improve the quality of the working environment for the company's employees and to encourage employee participation in such improvements.
5. To reduce or eliminate the pollution to air, ground or water.
6. To reduce to a minimum level the nuisance caused by noise of machinery or vehicles on company premises.
7. To reduce energy consumption whenever possible.
8. To request verification from suppliers that all timber based materials are supplied from well managed and sustainable sources.
9. To purchase materials from suppliers who provide verification or independent certification, and actively seek or replace non-certified materials.
10. To give preference to suppliers who are able to comply with the requirements of 8 and 9 above.
11. To continuously seek to improve the yield from goods received and to introduce measures which will ensure more effective use of material e.g. finger jointing, laminating, over veneering, product engineering.
12. To take all reasonable precautions to ensure that chemicals are used in a manner that does not create environmental health or safety hazards.
13. To be alert and responsive to the local community.
14. To discuss environmental matters at regular board meetings and carry out periodic environmental audits.
